FOREWORD

1. Objective and Scope

The *Economic Intelligence Statistical Handbook*, 1963, is a statistical compilation of economic factors useful in analyzing the economies of the Communist countries* and in comparing these economies with the economies of the countries of the North Atlantic Treaty Organization (NATO).**

The scope of the *Handbook* is basically the same as in previous years, although some tables have been added, others deleted, and the data revised as necessary. This edition of the *Handbook* supersedes all previous editions.

In general, the data in the *Handbook* are for 1950, 1955, 1958, 1960, 1962, and 1965. The data for individual countries of NATO and the Free World, however, are for 1950 and for the latest year available. The data for 1965 are official plans, estimated plans based on announced increases, or estimated production based on intelligence information. The titles, the stubs, and the footnotes for the tables indicate the countries covered. Certain of the more important economic data are presented graphically and in summary tables. The summary tables present selected economic indicators for all Communist countries and for India.

*Including the USSR, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Rumania, Communist China, North Korea, North Vietnam, Albania, Yugoslavia, Cuba, and Mongolia.

**Including the US, Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the UK, and West Germany. The Saar has been treated as a separate entity for certain commodities because its production often was listed separately in the sources used. Data for Alaska and Hawaii, when available, have been included in the total for the US.

Three unclassified tables have been added immediately following the Foreword, as follows: Selected Conversion Factors, Cross Rates of Exchange for Currencies of the NATO Countries, and Foreign Rates of Exchange for Currencies of the Communist Countries. The pages of these tables are perforated for easy removal.

2. Sources and Reliability

In the *Handbook* for 1963 the data for the Communist countries are estimates of this Office, official data, or estimates from other organizations. When estimates other than those of this Office are used, specific source references are given. In general, the data for countries of NATO are from unclassified publications of the US Government, the United Nations, and the Organization for Economic Cooperation and Development (OECD) and from official publications of other individual countries of the Free World. The data for the most recent years frequently are preliminary and subject to revision. Extreme care has been exercised in selecting sources, and every effort has been made to make the data for the Communist countries and NATO consistent in subject matter.

3. Footnotes and Symbols

The importance of the footnotes in the tables cannot be overemphasized. These footnotes should be noted carefully. They are used for general definitions and, more important, for exceptions to the data in the tables. In the tables the abbreviation *N.A.* (not available) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation *Negl.* (negligible) is used when the data are known to exist but, when recorded in terms of the number of digits used, are less than can be shown.

SECRET

4. Rounding and Totals

In each table the data for the individual countries have been rounded consistently to permit maximum use of available information. Because of the limitations in the cumulative data, the totals have been rounded, with few exceptions, to three significant digits. In general, zeroes appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation. Because of rounding, components may not add to the totals shown.

The data have not been adjusted to compensate for gaps in intelligence. Totals are not presented if missing data are believed to represent a significant part of the total. The data for countries in which little or no production takes place, or for which the data are not available, are not presented.

5. Political Boundaries and Classification of Data

Unless otherwise indicated, all data relate to present political boundaries. The over-all classification of the *Handbook* is SECRET. An asterisk (*) indicates that the data are unclassified. The unclassified data may be official unclassified data of the countries considered or may be unclassified estimates of this Office. All of the data marked by asterisks should be handled as FOR OFFICIAL USE ONLY.

The *Economic Intelligence Statistical Handbook*, 1963, was prepared in the Office of Research and Reports (ORR), Central Intelligence Agency. Statistical research on the data for the Free World and compilation of the data for all countries and commodities were performed by the Economic Accounts Section, Publications Staff, ORR, and research on all the data for the Communist countries was performed by the pertinent specialists in ORR.

North Vietnam.....	Dong.....	3.7 ^j	3.7 ^j	N.A. 1.92
Albania.....	Lek.....	50	150	55.56 84.00

^a Official rate unless otherwise indicated. Usually the official rate is a result of the legal definition of the currency in terms of gold and may not represent internal purchasing power. This rate, however, usually is reliable for converting trade statistics.

^b Tourist rates for conversion to Free World currencies.

^c Official rate unless otherwise indicated. Usually the official rate is a result of the legal definition of the currency in terms of gold and may not represent internal purchasing power.

^d This series of rates probably represents internal purchasing power for tourists and embassy personnel.

^e Beginning in 1959, this rate of exchange has been employed in quoting commercial trade totals. The officially announced commercial rate of exchange of 2.22 Deutsche Mark East (East German marks) to US \$1 is no longer in use.

^f This rate of exchange is the one actually used in East German accounting of foreign trade transactions. The officially announced commercial rate of exchange of 2.47 Deutsche Mark East to 1 ruble is no longer in use. (See footnote e, above.)

^g Generally accepted conversion rates, with the rate of 2.46 being used in trade with the Free World and the rate of 4.0 in trade with the Communist countries. Because official rates have never been announced by Communist China, these conversion rates have been estimated and, therefore, represent only approximations of actual rates.

^h An approximate rate. Actual rates vary depending on the transaction involved and the currency being traded. Actual rates also appear to change from time to time.

ⁱ A bank rate. North Korea has not announced an official relationship between the won and Free World currencies. This rate probably is used for noncommercial transactions.

^j A bank rate. North Vietnam has not announced an official relationship between the dong and Free World currencies. This rate probably is used for noncommercial transactions.

^a An asterisk indicates that the data are unclassified.^b A measure of the physical volume of goods and services produced by the economy, expressed in terms of market value at constant prices.^c Unless otherwise indicated, the base year for the computation of the rate of growth is 1950.^d Preliminary.^e Estimated GNP for 1965. Values for the European Satellites for 1965 are based on the planned average annual rate of growth of national income. This rate has been reduced by one percentage point as a rough allowance for the exclusion of governmental and personal services under the Communist concept of national income. Such services are expected to grow much less rapidly than the goods and services covered by the plan.^f The dollar values of gross national product (GNP) for the European NATO countries (total NATO excluding the US and Canada) in 1955 are estimates of Milton Gilbert and Associates, using the geometric mean of European and US weights. The aggregate GNP for the European NATO countries in 1955 was estimated by the US Department of State, using the estimates of Milton Gilbert and Associates and rough calculations for countries not listed. Estimates for other years were obtained by multiplying the 1955 data in dollars by indexes of GNP at constant prices for the respective countries.^g The values for the European Satellites have been calculated in a manner that makes them reasonably comparable with the values shown for the European NATO countries. Therefore, these estimates for the Satellites should not be compared with dollar values for Western countries that are obtained by applying the official rates of exchange.^h Data are for 1949.ⁱ Rate of growth for 1950-62. The base year is 1949.^j Rate of growth for 1956-62. The base year is 1955.

Table 2
 Distributive Shares of Gross National Product for the USSR
 by End-Use
 (Adjusted Value-Added *)
 1961

Category	Percent of Total
Consumption.....	59
Investment.....	30
Defense.....	10
Administration.....	1
Total.....	100

* Percentages are based on ruble values expressed in 1955 prices. Estimated GNP (adjusted value-added) for 1961 was 172.7 billion rubles (based on 1955 prices). Adjusted value-added is obtained by making certain adjustments in GNP derived by use of official factor prices and quantities. These adjustments are made to obtain a measure of GNP more comparable with that of the US. The results, however, are tentative, particularly with respect to the defense sector, because of the uncertainties involved in the pricing and the adjustments.

* An asterisk indicates that the data are unclassified.

^a Indexes for the US, France, Italy, the UK, and West Germany are value-added weighted indexes of intermediate and final products of industry. Industry includes manufacturing and mining and, in most countries, public utilities. The index for the UK includes construction, whereas the indexes for the other Western countries exclude construction. The indexes for the Communist countries are calculations of this Office (or other calculations accepted by this Office) and are constructed as nearly as possible on the same basis as the indexes for Western countries. The indexes for Yugoslavia are official calculations. The indexes for the Communist countries include manufacturing, mining, and public utilities.

^b The base year for the computation of the rate of growth is 1950.

^c Preliminary.

^d This index is the revised industrial production index (1957-59 base) of the US Federal Reserve Board.

^e Excluding the Saar and West Berlin.

^f Index of gross values for individual commodities and branches aggregated by 1955 value-added weights. The three sectors covered—materials, machinery, and consumer goods—comprise 44.3 percent, 34.2 percent, and 21.5 percent, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of industrial production of the US Federal Reserve Board.

^g Indexes for Bulgaria, Czechoslovakia, and Poland through 1960, for East Germany for 1950 and 1955, and for Hungary through 1958 are from private studies. All other indexes are estimates of this Office.

^h Estimates of this Office computed by applying value-added weights to data for commodity production.

* An asterisk indicates that the data are unclassified.

^a These indexes are measures of the "gross" value of production of industry at constant prices. The gross value of production is, in general, the sum of the value of output of all industrial enterprises. The definition of industry in Communist countries includes not only manufacturing, mining, and public utilities as in most Western definitions of industry but also certain other activities (varying from country to country).

^b Unless otherwise indicated, the base year for the computation of the rate of growth is 1950.

^c Based on plan fulfillment data.

^d This "official" index of industrial production was calculated by chaining together annual Chinese Communist claims for the increase in the gross value of industrial production. These annual claims are overstated in varying degrees and are not based on a stable and consistent accounting and price system.

^e Rate of growth for 1956-62. The base year is 1955.

Table 5

Indexes of Gross Investment in Industry ^a for the US and the USSR
Selected Years, 1950-62

1955 = 100

	1950	1955	1958	1960	1962	Average Annual Rate of Growth ^b (Percent) 1951-62
US ^c	83	100	94	105	104	1.9
USSR ^d	55	100	135	171	187	10.7

^a Indexes of the estimated gross investment in industry for the US and the USSR are subject to methodological and computational problems that may limit the usefulness of statistics. Nevertheless, the data can be used for growth analysis. A few of the specific problems that make the comparison of the absolute data and the indexes subject to varying interpretations are the relative efficiency of the investment funds, the index number problem, the lag-lead time for investment completion, the relative pressures of demand upon supply in two heterogeneous economies, the problem of investment concentration in certain sectors, the classification of government expenditures for the US, and the ratio of net capital formation to gross capital formation.

^b The base year for the computation of the rate of growth is 1950.

^c Data for the US are indexes for investment in new plant and equipment in the three categories of manufacturing, mining, and public utilities. Investment data in current dollar values are from the *Survey of Current Business*, and the deflator used to derive the constant dollar values for the index is an unpublished deflator series of the Office of Business Economics, Department of Commerce.

^d Industry in the USSR covers manufacturing, mining, and electric power. Urban distribution of electric power is excluded. The original investment data for the USSR included the Soviet category "Building Materials and Construction Industry." To eliminate the data for investment in the construction industry, this category was reduced by 30 percent, which was approximately the percentage of construction in state investment given in the Seven Year Plan (1959-65). On the basis of the growth in gross investment in industry in the USSR for the period 1960-62, it could be inferred that a corresponding growth occurred in economic activity for the same period. This growth in gross investment in industry, however, may not have brought about a corresponding growth in economic activity.

* An asterisk indicates that the data are unclassified.

^a For the Seven Year Plan (1959-65) the base year for the average annual rate of growth is 1958, and for the Twenty Year Plan (1961-80) the base year is 1960. Tonnages are given in metric tons.

^b Gross industrial production. The index number for 1962 is based on plan fulfillment data.

^c The Seven Year Plan goal has never been officially changed from the level of "about 180 percent" of 1958, or an index of 448 (1950=100). A new goal of two times that of 1958 or an index of 498 (1950=100) has been published.

^d Estimates of this Office.

^e This series differs from that presented in Table 48 (p. 65, below), inasmuch as this series also includes peat, shale, and firewood and excludes hydroelectric power.

^f Metric tons of standard fuel. Standard fuel has a calorific value of 7,000 kilocalories per kilogram.

^g Minimum plan for 1965.

^h Official plan for 1965. Based on the interpretation of material taken from a variety of Soviet sources, the plan data probably will be revised as follows: coal, 535 million metric tons; crude oil, 247 million metric tons; and natural gas, 140 billion cubic meters.

ⁱ This series differs from that presented in Table 55 (p. 72, below), inasmuch as this series also includes production of gas from coal and shale. In 1960, production of gas from coal and shale amounted to 1.9 billion cubic meters.

^j Including slaughter fats and poultry. Carcass weight, bone-in basis. To exclude offal and meat other than beef, veal, pork, mutton, lamb, goat, and carabao and to reduce the overestimation of production from privately owned livestock, official data have been reduced by 32 percent.

^k To exclude milk produced by animals other than cows and to reduce the overestimation of production from privately owned cows, official data have been reduced by 12 percent.

^l Including cotton, wool, linen, and silk.

^m This series differs from that presented in Table 89 (p. 106, below), inasmuch as this series is in terms of gross weight.

ⁿ Production for 1965 estimated by this Office.

^o Also carried in official plans as 84.6 million metric tons.

* An asterisk indicates that the data are unclassified.

^a Data are derived by subtracting exports from and adding imports to production.

^b Including footwear with leather or mainly leather uppers but excluding slippers and rubber footwear.

^c Producer sales.

^d Based on midyear population.

Table 15
Production and Availability of Grain in Communist China
Selected Years, 1957-62

Year	Production of Grain (Million Metric Tons)		Year-End ^a Population (Millions)	Production Per Capita (Kilograms)	Production Required ^b (Million Metric Tons)	Net Trade ^c (Million Metric Tons)	Deficit or Surplus ^d (Million Metric Tons)					
	Total											
	Of which: tubers ^e											
1957.....	185	22	649	285	185	N.A.	N.A.					
1958.....	212	30	665	319	190	-2.0	+20.0					
1959.....	185	25	679	272	194	-2.0	-11.0					
1960.....	180	24	691	260	197	+2.0	-15.0					
1961.....	180	26	701	257	200	+5.3	-14.7					
1962.....	185	26	712	260	203	+4.6	-13.4					

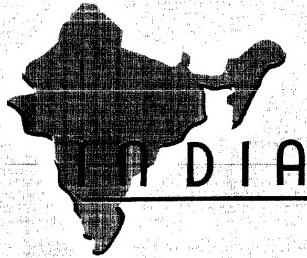

^a Year-end population is used because the food consumption year runs from July through June and because the production in calendar year is consumed in the last half of the year within which it is produced and the first half of the following year.

^b Based on the selection of 1957 per capita production as a reasonable standard.

^c A minus sign indicates net exports and a plus sign indicates net imports.

^d Production plus net trade minus required production.

^e Grain equivalent basis of 4 to 1.

* An asterisk indicates that the data are unclassified.

Computations are based on estimates of internal purchasing power. Data, if converted to US dollars on the basis of a uniform rate of exchange of 4.762 rupees to US \$1, would be (in billion 1955 US \$) as follows: for 1950, 20.4; for 1955, 23.7; for 1958, 26.7; for 1960, 29.1; for 1961, 30.3; and for 1962, 31.5.

^b Excluding data for Sikkim.

^c Including anthracite and bituminous coal but excluding brown coal and lignite.

^d Estimated from planted acreage.

^e Data are for 1951.

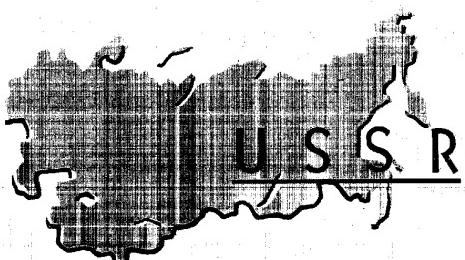

^f Including mixed yarn.

^g Including automobiles and commercial vehicles.

^h Unless otherwise indicated, data are for the year beginning 1 April of the stated year.

ⁱ Data are for the calendar year.

^{*} An asterisk indicates that the data are unclassified.^a Estimates of this Office computed by applying value-added weights to data for commodity production.^b This "official" index of industrial production was calculated by chaining together annual Chinese Communist claims for the increase in the gross value of industrial production. These annual claims are overstated in varying degrees and are not based on a stable and consistent accounting and price system.^c Excluding the armed forces.^d Metric tons of standard fuel. Standard fuel has a calorific value of 7,000 kilocalories per kilogram.^e Including a negligible amount of brown coal.^f Excluding coke made in beehive, clamp, native, and "small modern" furnaces.^g Excluding production from "native furnaces."^h Including 4.72 million metric tons of steel made in small side-blown converters.ⁱ Including blast-furnace ferroalloys.^j Including 4.16 million metric tons of "native iron."^k Including 9.6 million metric tons of pig iron made in "small blast furnaces," of which 5.9 million metric tons were usable for steelmaking.^l Excluding potatoes and soybeans.^m Including sweet potatoes, Irish potatoes, and other starchy tubers such as taro and cassava.ⁿ Including buffaloes. Data refer to the number of cattle for midyear for 1950 and 1955 and for the end of the year for 1958-59.^o Data are for 1949.^p The number of hogs that can be accounted for varies from 72 to 85 percent of the official numbers for 1950 and 1955. The numbers for 1958-59 vary from 30 to 40 percent. Data refer to the number of hogs for midyear for 1950 and 1955 and for the end of the year for 1958-59.^q Carcass weight, bone-in basis; including poultry.

* An asterisk indicates that the data are unclassified.

^a Data refer to total (gross) production at generating centers (therefore including transmission losses and station use). (See footnote b, below.)

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.5 percent the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the total gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.

^c Estimated data.

^d Data for the Saar are included with West Germany.

^b Metric tons of standard fuel. Standard fuel has a calorific value of 7,000 kilocalories per kilogram.

^c Estimated production for 1965.

^d NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." In computing metric tons of standard fuel, a ton of brown coal and lignite has been converted to a hard coal (standard fuel) equivalent by multiplying the brown coal and lignite by 0.29. These data have then been added to the total for anthracite and bituminous coal.

^e Including data for Luxembourg.

^f Data for the Saar are included with West Germany.

* An asterisk indicates that the data are unclassified.

^a NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data for NATO relate, as far as possible, to natural gas (net production) actually collected and utilized as fuel or raw material. They thus exclude gas used for repressuring, as well as gas flared, vented, or otherwise wasted, whether or not it has first been processed for the extraction of natural gasoline.

^b Data for the US are in terms of net marketed production and agree with the general definition for the NATO data. Data for the USSR are believed to refer to gross production less losses and waste. US gross production (less losses and waste) which would include gas returned to reservoirs in order to maintain horizon pressure (about 13 percent of gross production in 1955 and 1961) would be as follows (billion cubic meters):

1950	1955	1958	1960	1961
217	310	354	411	423

A much smaller share of total production in the USSR is believed to be used for repressuring.

^c Data for the Communist countries are for gross production.

^d Estimated production for 1965. The official plan for 1965 is 149.8 billion cubic meters. These data, however, based on the interpretation of material taken from a variety of Soviet sources, probably will be revised to 138 billion cubic meters.

^e Plan data.

^f Estimated production for 1965.

^g Producer shipments.

^h Total production, including gas for repressuring and gas wasted.

ⁱ Data are for 1961.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data previously published in the *Handbook* were for diesel fuel, a much more restrictive category. For example, sales of diesel fuel oil on the basis of all categories of use for the US were as follows (in thousand metric tons): for 1950, 14,000; for 1955, 22,700; for 1958, 26,100; and for 1960, 27,600.

^b Excluding data for Greece. (See footnote a, above.)

^c Total of light and heavy types, excluding relatively small yields of synthetic stocks.

^d Including diesel fuel and residual fuel oils.

^e Including all but fuel oils.

^f Except for data for 1950, excluding diesel oil, which is included with residual fuel oil.

^g Excluding losses and refinery use.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to production of refined metal obtained from ores and concentrates or from scrap and old material. Metal recovered by mere fusion (without refining) from scrap or old material is excluded.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Byproduct in the electrolytic refining of copper and, except for data for 1950, recovered nickel from refined domestic ore.

^d Estimated plan for 1965.

^e Produced from imported ores.

^f Produced from ore stock and scrap.

^g Ore exhausted.

^h Nickel content of oxides and sulfides.

ⁱ Production of nickel for Canada (refined nickel, nickel in oxide produced, and recoverable nickel in matte exported) was as follows (in metric tons): for 1950, 111,600; for 1955, 158,800; for 1958, 126,100; for 1960, 195,000; and for 1961, 216,900. Much of this production is exported for refining in other countries, especially the UK and Norway.

^j Content of ore.

Greece.....	5.1*	16.0*	Turkey....	207.0*	211.5*			

* An asterisk indicates that the data are unclassified.

^a Data refer to the estimated chromic oxide (Cr_2O_3) content of the ores mined. In many instances, data are only approximate.

^b NATO totals include only data for the US, Greece, and Turkey.

^c Shipments.

^d Production for the Federal Government only.

^e The following percentages were used to reduce the estimates of the ores mined in the Communist countries to show the chromic oxide content: USSR, a part at 35 percent and the remainder at 40 percent; North Vietnam, at 50 percent; Albania and Rumania, at 45 percent; and Bulgaria, at 30 percent.

^f Estimated plan for 1965.

^g There are indications that Bulgaria imports its chrome ore requirements—domestic production probably has ceased.

^h Production is believed to have ceased because reserves are not suitable for metallurgical use.

ⁱ US imports.

* An asterisk indicates that the data are unclassified.

^a Data refer to rolling mills; mechanical equipment for coke, blast, and smelting furnaces; mixers; crushers; grinding mills for ore and coal; agglomeration installations; and special hoist-transport mechanisms for metallurgical shops. Equipment for nonferrous shops is believed to be included but probably amounts to only a small percentage of the total physical volume. Data are not available for the US in terms of metric tons. Expenditures in the US in current US dollars for new machinery and equipment for blast furnaces, steel mills, and nonferrous metal-producing facilities are as follows: for 1950, US \$354 million; for 1955, US \$522 million; for 1956, US \$950 million; and for 1957, US \$1,331 million. Data for later years are not available.

^b Midpoint of the range of planned production for 1965 of 200,000 to 220,000 metric tons. The plan for 1965 is for rolling mill equipment only, which normally constitutes 50 to 60 percent of all metallurgical equipment produced in the USSR.

^c Rolling mill equipment only. Production data are not available for all metallurgical equipment.

^d Including large quantities of small-scale equipment not normally produced in other Bloc countries.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to net metric ton-kilometers and include all goods and livestock carried during the calendar year by trains other than plantation, industrial, forest, mining, funicular, and cable railroads but exclude service traffic, mail, and nonrevenue government stores. Data include domestic, import, export, and transit freight traffic. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign trade freight traffic carried through more than one country, however, is counted in each country. Data for the US specifically include revenue and nonrevenue freight traffic on Class I and II railroads.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Upper limit of the range of the plan for 1965 of 1,800 billion to 1,850 billion metric ton-kilometers.

^d Including performance of railroads owned jointly by Hungary and Austria and performance by narrow-gauge railroads for "limited public use."

^e Estimated performance for 1965.

^f Plan data for 1967.

^g Including service traffic.

^h Full carloads only; excluding military traffic.

ⁱ Government railroads.

^j Data are for the year beginning 1 April.

^k Including military and government traffic.

^l Excluding livestock.

^m Full carloads only.

ⁿ Data are for the year beginning 1 July of the previous year.

^o Excluding Northern Ireland. Data include service traffic.

a Performance in the Communist countries other than in the USSR, Czechoslovakia, and Rumania is negligible.

b The original Seven Year Plan (1959-65) goal was 185 billion metric ton-kilometers. Soviet sources reveal that this plan now has been abandoned and that a total of 73 billion metric ton-kilometers has been cut from the original Seven Year Plan goals for 1963-65.

Table 119

Petroleum Pipeline Transportation, in Tons Carried, in the US and the Communist Countries
 Selected Years, 1950-62, and 1965 Plan

Rumania.....	1.0*	2.0*	3.7*	5.6*	5.3*	6.9*	

* An asterisk indicates that the data are unclassified.

a Data refer to tons originated, thus giving a more realistic comparison with the Communist countries.

b Performance in the Communist countries other than in the USSR, Czechoslovakia, and Rumania is negligible.

c The original Seven Year Plan (1959-65) goal was 240 million metric tons carried, but this goal may have been reduced inasmuch as the goal for ton-kilometers has been reduced.

* An asterisk indicates that the data are unclassified.

^a Data refer to all types of mainline locomotives (diesel, diesel-electric, electric, and steam). For detailed data for diesel and electric locomotives, see Tables 123 and 124 (p. 134, below).

^b Data refer to units put into service on first-class railroads and, unless otherwise indicated, include mainline locomotives exported. Data on exports of mainline locomotives have been revised and differ from the previous *Handbook*, in which export data referred to new railroad-service locomotives as well as used or rebuilt locomotives. The revised export data include electric, diesel-electric, switching diesel electric, and industrial surface mine locomotives and are as follows: for 1955, 258; for 1958, 787; for 1960, 527; for 1961, 711; and for 1962, 642.

^c Excluding exports.

^d Data include only locomotives produced for government railroads.

^e Data have been revised to relate to mainline locomotives added to the operating stock by the British Transport Commission and to those exported, rather than to production data, which no longer are available.

^f Data include primarily industrial and switching types.

* An asterisk indicates that the data are unclassified.

^a Data refer to cars of two, four, or more axles. The size of the car is given in the footnotes if it is known. Because of the lack of comparability in data, totals for NATO and the Communist countries are omitted.

^b All freight cars have four axles or more.

^c Of the freight cars in the USSR, 75 to 80 percent were four-axle or multiaxle units in 1962.

^d Excluding narrow-gauge rolling stock.

^e Most freight cars have four axles.

^f Cars for government railroads only.

^g Data are for 1960.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data for the Communist countries refer to telephone subscribers, including both private and civil government (other than military) users. Data for NATO refer to telephones in use, including both public and private telephones that can be connected to a central exchange. The number of subscribers is smaller than the number of telephones in the same country, but no reliable ratio between the two can be supplied.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Data refer to telephones in use that are serviced by the Ministry of Communications only.

^d Estimated number for 1965.

^e Data are for 1956.

^f Data are as of midyear.

^g Data are as of 31 March of the following year.

* An asterisk indicates that the data are unclassified.

^a As distinct radio receivers, wired loudspeakers are connected to government-controlled distribution (wire-diffusion) centers. These centers receive normal radiobroadcasts and retransmit them to loudspeakers by wire or cable. Program reception on wired loudspeakers is thereby restricted to those radiobroadcasts sponsored by the government.

^b NATO totals include only data for those NATO countries that are listed under "Other NATO Countries."

^c Including data for 1957 for Belgium.

^d Estimated number for 1965.

^e Plan data.

^f Data are for 1954.

^a An asterisk indicates that the data are unclassified.

^a Including economic and technical assistance and defense support obligations under the Mutual Security Program, PL 480 funds earmarked for country use, Development Loan Fund approvals, and authorized long-term Export-Import Bank loans. Data are for the period 1 July 1955-30 June 1962. Data exclude US \$20 million to Cuba and US \$973 million to Yugoslavia.

^b Data reflect extensions, not actual drawings.

^c Including credits and grants. Data exclude US \$469 million to Cuba and US \$111 million to Yugoslavia.

^d Including credits, discounts, and grants. Data exclude US \$475 million to Cuba.

^e Including only those credits extended after the formation of the Laos Coalition Government under the Geneva accord of July 1962.

^f Excluding some US \$12 million in credits from Czechoslovakia and East Germany that have expired.

* An asterisk indicates that the data are unclassified.

^a Because of the difficulty of determining valid rates of exchange, data are not presented in terms of a common currency. Official parity rates should be used with caution because they have been established and maintained arbitrarily and do not necessarily reflect the true ratio for construction. For example, the estimated ruble-dollar ratio for construction in the USSR in 1955 prices is about 0.70 new ruble to US \$1.

^b Data include the state and cooperative sector, private housing construction, and construction-installation work performed by collective farms (excluding fishing artels).

^a Based on 1 July 1955 prices in new rubles.

^d Estimated value of construction for 1965.

• Value of state construction.

^f Deutsche Mark East (East German marks).

Table 153

* An asterisk indicates that the data are unclassified.

^a Data refer to the total housing space, including living rooms, bedrooms, dining area, and auxiliary space such as bathrooms, kitchens, closets, and inside hallways.

^b Including 81.6 million square meters of urban housing and 17.0 million square meters of rural housing.

^c Data are for 1951.

^d Data for urban housing are as follows: for 1950, 2.51 million square meters; for 1955, 14.46 million square meters; and for 1958, 26.42 million square meters.

^e Total area constructed during 1955-60.
